GlobalSign | Solutions

Free SSL Certificates for Open Source Projects

GlobalSign is committed to the open source community

- Free Wildcard SSL Certificate for qualified open source projects
- Offer available as long as project meets the program requirements

GlobalSign's Open Source Project Initiative

We love open source and we know you do too!

While we support the open source community in a number of ways one natural way for us to do so is by helping increase the adoption of SSL within.

We believe this effort will do more than help the developers and users of those projects, we believe it has the potential to encourage adoption of industry best practices in the adoption of SSL.

Today nearly all businesses use open source somewhere, as leaders we believe together we can make a difference in how SSL is deployed today.

Why Should Open Source Projects use SSL?

Sign up now to begin securing your open source project with a GlobalSign SSL

Ruby Issue Tracking System

ホーム

Ruby is a dynamic, open source programming language with a focus on simplicity and productivity. It has an elegant syntax that is natural to read and easy to write. This system is hosting the development of Ruby language and its related projects.

You must register your account and activate it via an email before reporting issues. Or login if you have an account.

How to report a bug

See HowtoReport (English) or HowtoReportJa (Japanese).

Popular Projects

- ruby-trunk - Developing version of Ruby
  - Backport 200 - Current stable release of Ruby 2.0 series.
  - Backport93 - Current stable release of Ruby 1.9 series.
  - Backport87 - A stable release of Ruby for bridging a gap between the 1.8 and 1.9.

Obsoleted Projects

- ruby-19
  - Backport92 - Previous stable release of Ruby 1.9 series.
  - Archive91 - The first stable release of Ruby 1.9 series.
- Ruby 1.8 - Old version of Ruby
  - Backport86 - An ancient stable release of Ruby that Rails users love
- Ruby - Version-independent topics

class BasicObject

BasicObject is the parent class of all classes in Ruby. It's an explicit blank class.

BasicObject can be used for creating object hierarchies independent of Ruby's object hierarchy, pro
namespace pollution from Ruby's methods and classes must be avoided.

To avoid polluting BasicObject for other users an appropriately named subclass of BasicObject shou

```
class MyObjectSystem < BasicObject
end
```

BasicObject does not include Kernel (for methods like puts) and BasicObject is outside of the names
be found without a using a full class path.

A variety of strategies can be used to provide useful portions of the standard library to subclasses of
puts, exit, etc. A custom Kernel-like module could be created and included or delegation can be use

```
class MyObjectSystem < BasicObject
  DELEGATE = [:puts, :p]

  def method_missing(name, *args, &block)
    super unless DELEGATE.include? name
    ::Kernel.send(name, *args, &block)
  end

  def respond_to_missing?(name, include_private = false)
    DELEGATE.include?(name) or super
  end
end
```

Access to classes and modules from the Ruby standard library can be obtained in a BasicObject sub
like ::File or ::Enumerator. Like method_missing, const_missing can be used to delegate constant loo

```
class MyObjectSystem < BasicObject
  def self.const_missing(name)
```

Ruby Association will be hosting a design contest for the new design of ruby-lang.org

ruby-lang.org has switched its platform from Radiant CMS to Jekyll in spring 2013.

Everyone can now edit the content through GitHub. How about that?

However, the current design is built for the typical size of a desktop or laptop but not for smartphones and tablets.

We still need more work for the design!

Ruby's 20th anniversary this year seems like an appropriate occasion for a call to submit design ideas for ruby-lang.org

Please read the instructions below and send your design entry.

SUBMISSION GUIDELINES

Overview

New design for www.ruby-lang.org

Design Concept

- The base color should be red (Ruby color). Your design should contain the Ruby logo of www.ruby-lang.org.
- You can download a high resolution version of the Ruby logo image from http://cache.ruby-lang.org/pub/misc/logo/
- It should support multiple devices with no layout broken. Responsive design is preferable.
- It should support i18n. The new design should also support the languages that are currently used at ruby-lang.org
- You can change the structure of an HTML if necessary

Ruby

A Programmer's Best Friend

About Ruby

Wondering why Ruby is so popular? Its fans call it a beautiful, artful language. And yet, they say it's handy and practical. What gives?

The Ideals of Ruby's Creator

Ruby is a language of careful balance. Its creator, Yukihiro "Matz" Matsumoto, blended parts of his favorite languages (Perl, Smalltalk, Eiffel, Ada, and Lisp) to form a new language that balanced functional programming with imperative programming.

He has often said that he is "trying to make Ruby natural, not simple," in a way that mirrors life.

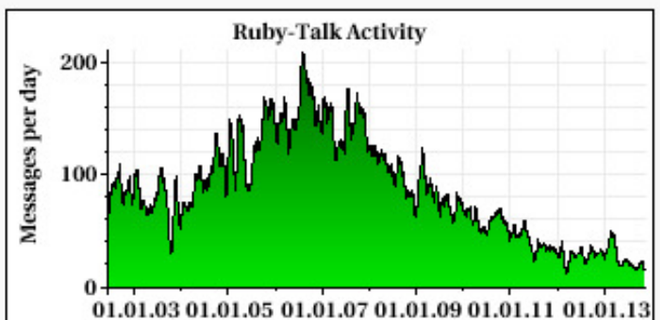

Building on this, he adds:

> Ruby is simple in appearance, but is very complex inside, just like our human body[1].

About Ruby's Growth

Since its public release in 1995, Ruby has drawn devoted coders worldwide. In 2006, Ruby achieved mass acceptance. With active user groups formed in the world's major cities and Ruby-related conferences filled to capacity.

Ruby-Talk, the primary mailing list for discussion of the Ruby language, climbed to an average of 200 messages per day in 2006. It has dropped in recent years as the size of the community pushed discussion from one central list into many smaller groups.

The TIOBE index, which measures the growth of programming languages, ranks Ruby as #9 among

```ruby
# The Greeter class
class Greeter
  def initialize(name)
    @name = name.capitalize
  end

  def salute
    puts "Hello #{@name}!"
  end
end

# Create a new object
g = Greeter.new("world")

# Output "Hello World!"
g.salute
```

A dynamic, open source programming language with a focus on simplicity and productivity.

```ruby
# The famous Hello World
# Program is trivial in
# Ruby. Superfluous:
#
# * A "main" method
# * Newline
# * Semicolons
#
# Here is the Code:

puts "Hello World!"
```

RubyWorld Conference 2013

Home | News | Program | Venue | Entry | Contact | Sponsor

The "Ruby" programming language is entering a new era, as its use expands into various situations. February this year marked 20 years since its development, and Ruby 2.0 has been released as a major version for the first time in five years.

In the past, people used to believe that "There would never be software from Japan used around the world." But Ruby's success has clearly revealed that this "common sense of the past" was nothing but a bunch of assumptions.

By telling everyone about Ruby's possibilities, this year's RubyWorld Conference will provide an opportunity to create a "new common sense" as well as "the future."
