Backport:	2.0.0: REQUIRED, 2.1: REQUIRED

説明

Capturing a file from FTP using the default ftp.get (assuming binary is false) causes text files to get truncated before the last occurrence of "\n". This means that files mis

```
Net::FTP.open(host, username, password) do |ftp|
  puts ftp.gettextfile(filename, nil)
end
```

```
file: "<xml></xml>"   output: ""
file: "<xml>\n</xml>" output: "<xml>"
file: "<xml></xml>\n" output: "<xml></xml>"
```

Behaviour looks correct in 1.9.3, returns full file content in all cases. Regression exists in ruby 2.0 and 2.1. Tested with:

Thought I'd post this, let me know if I can help with more info.

I've experienced it in a number of different places. No segfaults occurring when debugger is not used.
